

1. Which tasks have been completed?

- Web Scraping using BeautifulSoup
 - First page of Google Search
- Chrome Extension basic layout

2. Which tasks are pending?

- Text Mining using MetaPY to analysis scraped data
- Statistical analysis and data visualizations
- Chrome extension integration with the extracted information
- Presentation and report

3. Are you facing any challenges?

- None of us have a lot of experience building Chrome Extensions. It took a lot of research and learning to figure out how to build it.
- We are still trying to figure out how to minimize the wait time on the user end when we are doing the web scraping. Currently, we plan to create a MVP where we just scrape the first page of Google. As nice future improvements, we can try to minimize wait time while scraping more information/pages.
- Deciding on the best way to represent the analyzed data, from design aesthetics to model selection.
